WEB DESIGN

Westwood College

SUMMARY

After taking a break to prioritize raising my family, I am returning to a career as a software engineer. While raising my family, I have taken on freelance work, built websites, and found exciting opportunities to use my engineering skills to solve some of the challenges I encountered. I am now looking for a full-time position as a software engineer.

RECENT PROJECTS

Homeschool Dash (Full Stack Web App) – Many in my local homeschooling group were frustrated with the lack of supporting software availability. While tracking software exists in most traditional classrooms, there is nothing for homeschooling. After surveying caregivers in the group, I designed a dashboard to track student progress. Based on early feedback, other features are being considered for implementation.

[JavaScript-MongoDB-Express-NodeJS-TailwindCSS](#) [See it: GitHub | Live](#)

Shake-It (Web App) – Inspired by my daughter's love for vintage photos, and the prohibitive cost of the modern day versions, I designed an app that would allow her to recreate the iconic Polaroid style to share with friends. A variety of filters are available to age or adjust the lighting of the photo. Text can also be added to the outer frame, along with a selection of "handwritten" font choices.
